

## SOLAR COMFORT WINDOW COVERING PRODUCTS PRESENTS

I just love my exterior solar screens! They really add to the looks of my home even if they do get real hot and hold the heat against my windows. They are also real easy to clean every year.

Well.... That was yesterday and now the rules have changed! You do not have to put up with ugly black screens that do provide some shading but do not offer the level of radiant protection that you deserve for your home.

**New SOLAR COMFORT RADIANT BARRIERS are the ultimate in radiant protection.**

**Developed by NASA, radiant barriers reflect the raw radiant energy (cold electromagnetic energy from the sun) that converts into heat when it strikes a surface.**

**So why use ugly black material that will convert the maximum amount of heat from the sun and hold it against your window?**

**Get rid of it before it converts to heat inside or on your windows.**

## SOLAR COMFORT BENEFITS:

The view from the inside is clean and crisp.

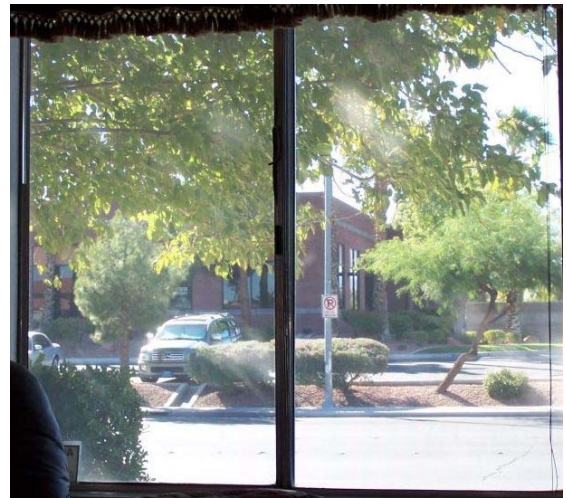

Radiant heat is reflected away from your windows providing the highest performance in heat reduction in your homes.

The soft white material adds to the style and beauty of your home.

Easy to clean and maintain year round.

Offers privacy during the daylight hours.

Great energy savings.

**ROLLER BLINDS  
VERTICAL BLINDS  
SLIDING PANELS**

## OTHER PRODUCT STYLES AND FORMS

Solar Comfort products can be made in a number of product styles and forms to fit most any application.

The best form of protection and energy savings can be when the radiant barrier is installed inside the home. They can also be used with existing window coverings.

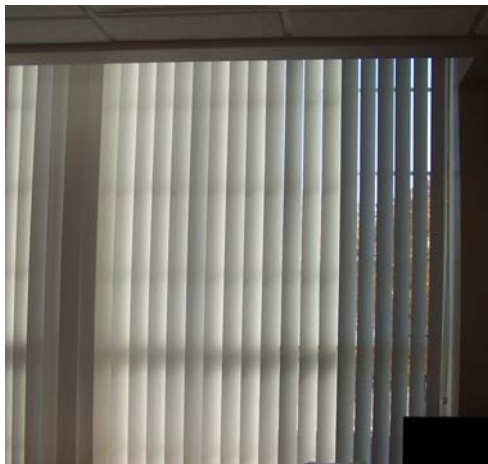

Products can be made in forms.

## HANGING PANELS & INSIDE DIRECT APPLICATION TO WINDOW FRAMES
